

Providing Automation Solutions

Designed to minimize the dead volume found in flat bottom vials, the Center Draining™ Vials feature an interior conical base. This design promotes the ease of sample transfers with smaller scale volumes. The vials are constructed of Type I Class A Borosilicate glass and are manufactured with the precision required for high throughput automation systems.

Pico Pure Plus+™

(Patent Pending)

- Developed for the LCMS Market
- Pico Pure Plus+™ is well below the picogram range of purity for extractables
- Pico Pure Plus+™ does not have the contamination issues that vials with a cap and PTFE/Silicone septa have, as the following comparison illustrates:

This comparison was done by filling each vial with methanol, inverting each vial for one hour, and piercing it 3 times with a direct injection electro spray single quad mass spec.

Xposure Science, LLC

Xposure Science, LLC was founded upon the basic principles of fair pricing, quality work, and exceptional customer service. The ownership of Xposure Science has over 18 years of combined experience working in and with the research communities. We began our mission in 2005 by supplying researchers with unique and specialty glassware at an honest price. In 2006, Xposure Science expanded its capabilities to include automated instrumentation and supplying clients with customized products and systems. Among these products are our Timer Module, Power Module, Shuttle Systems, and Automated Laboratory Workstations. We have teamed with leaders in these fields in order to guarantee an efficient supply and production chain.
